

The role of forests as absorbers of CO₂ has been accentuated by UNFCCC COP (United Nations Framework Convention on Climate Change, Conference of the Parties) 21 in Paris in 2015 and UNFCCC COP 22 in Marrakesh, among others. On 20 April, we went to the Kobiór Forest Area where we took part in a workshop on forests as CO₂ sinks. We also found out about a forest nursery – growing trees from seed. We are enormously proud of the forest we planted that day. It grows on the area of the natural disaster of 2005. The whole event was broadcast on the radio and television.

Total number of participants: 30
Place: Nadlesnictwo Kobiór
